Overview 3

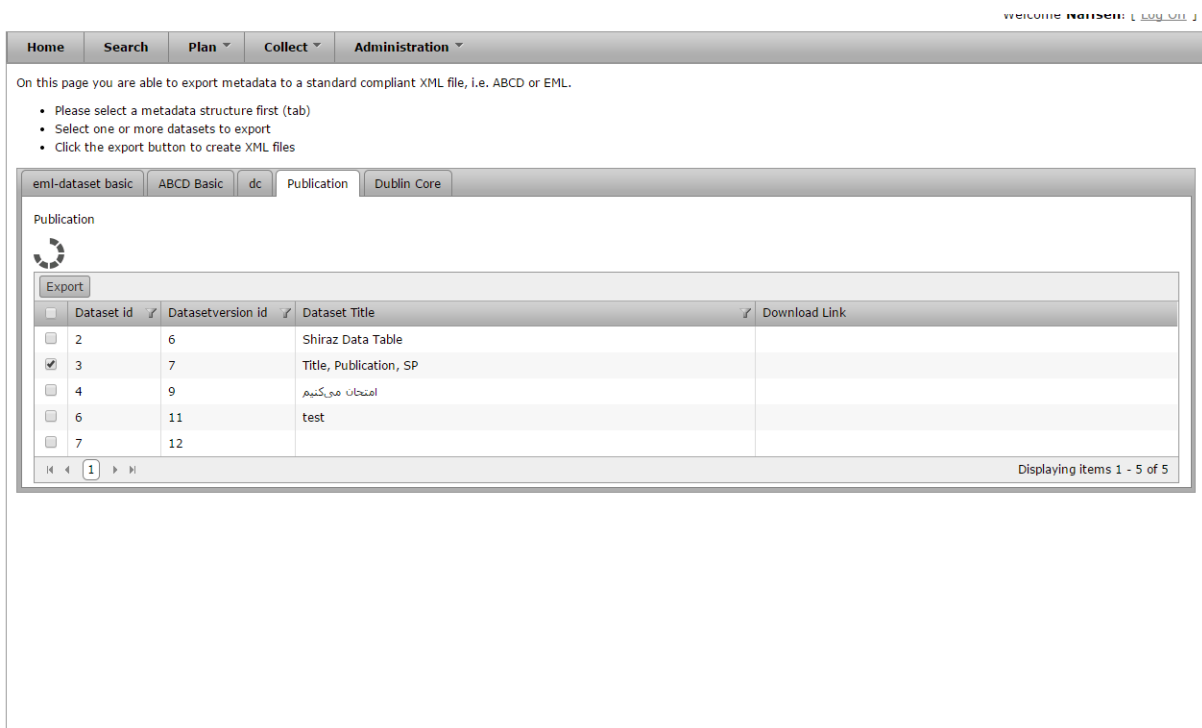

Overview

The Data Dissemination Module provides a tool to export metadata to a standard compliant XML file (EML and ABCD standard are supported). For every metadata structure in the system there is one tab in the tab strip.

The data grid in one tab shows all datasets belonging to the selected metadata structure.

Select a checkbox to mark the datasets you would like to export.

Please click the export button and wait until the metadata XML file has been created successfully and a download link is available in-line.

The screenshot shows a web application interface for exporting metadata. At the top, there is a navigation bar with links for Home, Search, Plan, Collect, and Administration. Below this, a message states: "On this page you are able to export metadata to a standard compliant XML file, i.e. ABCD or EML." followed by instructions: "Please select a metadata structure first (tab)", "Select one or more datasets to export", and "Click the export button to create XML files".

The main content area features a tabbed interface with tabs for "eml-dataset basic", "ABCD Basic", "dc", "Publication", and "Dublin Core". The "Publication" tab is active, showing a table of datasets. Above the table is an "Export" button and a refresh icon. The table has columns for "Dataset id", "Datasetversion id", "Dataset Title", and "Download Link".

<input type="checkbox"/>	Dataset id	Datasetversion id	Dataset Title	Download Link
<input type="checkbox"/>	2	6	Shiraz Data Table	
<input checked="" type="checkbox"/>	3	7	Title, Publication, SP	
<input type="checkbox"/>	4	9	امتحان دو کلاس	
<input type="checkbox"/>	6	11	test	
<input type="checkbox"/>	7	12		

At the bottom of the table, there is a pagination control showing "1" and "Displaying items 1 - 5 of 5".
