

BEXIS 2.8.0 Release Notes 10.11.2015

With this release we introduce the new user interface of BEXIS. Over the past 8 month we have been working hard with the users community and the designers from Kombinat Süd to make this happen. We believe the usability of the system has improved a lot, especially in terms of consistency and visual appearance. However, there is more in the pipe. We need easier workflows, but those had to wait until the next release.

A first step in this direction is the re-designed metadata entry page within the dataset creation process. This comes with the heavily demanded functionality of editing exiting metadata.

In the security section a logged-in user is now able to edit his/her profile (My Account) including specifying a new password.

A note for system administrators and developers: most dependencies for BEXIS 2.8.0 have been upgraded (e.g. .NET 4.5.2, MVC 5.2.3, Telerik 2013.1.611). See below.

I. Software Information

- Name: BEXIS
- Version: 2.8.0
- Application Type: Web Application
- Platform: Windows

II. License Agreement

The contents included in this software are licensed to you, the end user. Your use of BEXIS software is subject to the terms of an End User License Agreement (EULA) accompanying the software and located in the \License subdirectory. You must read and accept the terms of the EULA before you access or use BEXIS software. If you do not agree to the terms of the EULA, you are not authorized to use BEXIS software.

III. System Requirements

- Operating System: Windows Server 2003 or 2008. For personal or small installations the software is able to run on Windows 7 too
- Application Server: IIS 7.0 +. For IIS settings see the installation manual
- DBMS:
 - IBM DB2 Express C 10 (version 10.1.2) 32 or 64 bits. BEXIS has not been tested on other versions!
 - PostgreSQL: (version 9.3) 32 or 64 bits. BEXIS has not been tested on other versions!
- Dependencies
 - Microsoft.NET Framework 4.5.2
 - Microsoft.ASP.NET.MVC 5.2.3

- Microsoft.ASP.NET.Razor.de 3.2.3
 - Microsoft.ASP.NET.WebHelpers 3.2.3
 - Microsoft.ASP.NET.WebPages.WebData 3.2.3
 - Microsoft.JQuery.Unobtrusive.Validation 3.0.0
 - Lucene.Net 3.0.3
 - Lucene.Net Contrib 3.0.3
 - NHibernate 4.0.4.4000
 - Telerik MVC Extensions 2013.1.611
 - Unity Application Block 3.5.1404
 - Npgsql 2.2.5
 - PostSharp 4.1.21
 - Linq 1.0.4
 - bootstrap 3.3.5
 - bootstrap-slider 5.0.13
 - FluentBootstrap 3.3.5.1
 - FluentBootstrap.Mvc 3.3.5.1
 - font-awesome 4.4.0
- Disk Space:
 - The Software: 30-40 MB
 - The Workspace: 10 MB and more, based on the number of modules and the amount of data

IV. Installation

To install the software, please follow the instructions in the Install_Manual_BPP280.pdf.

V. System Functionality

The software consists of two main types of components; 1) core components that include Data Lifecycle Management (DLM), Web Interfaces, Security and some other internally used ones. 2) A collection of coherent features and use-cases bundled as modules so that each module is designed around one or a small set of steps of the DLM workflow i.e., Data Submission, Quality Control/ Assurance, Data Publication and so on.

a) General Application Features

General Application features are available in the entire application and across all modules.

Existing Features

- Online Help for each module now available within the application (version 2.7.0)

New Features

- NA

Changed/ Enhanced Features

- NA

Dropped Features

- NA

Fixed Issues

- NA

Breaking Changes

- NA

Known Issues

- NA

b) Data Discovery Module

The main purpose of this module is to enable users to search for data available within the system. The module executes user defined queries against the metadata and primary data and provides advanced features such as facets, keywords, categories, filters, grouping, and sorting. Depending on individual user permissions the system provides access to full metadata records, the underlying data structure and the primary data.

Existing Features

- **Discover data using metadata dimensions (aspects, facets) and attributes (version 2.0.0)**
- **Configure search module through a user interface (version 2.1.0)**
- **Primary data search (version 2.4.0)**
- **mapping Lucene fields to multiple Metadata Nodes in the Search Component Manager (version 2.5.0)**
- **The homepage contains a list of accessible dataset (version 2.6.0)**

New Features

- Edit metadata of an exiting dataset from the Show Details page.

Changed/ Enhanced Features

- NA

Dropped Features

- NA

Fixed Issues

- NA

Breaking Changes

- NA

Known Issues

- Facets do not act as expected when names contain special characters (e.g. “-“).

c) Data Collection Module

The purpose of the data collection module is to allow users to submit data alongside with metadata. The module processes the data in accordance with its data/metadata structure rules to find any inconsistencies and communicates with the user to overcome the issues. The module may also notify or trigger other internal services such as the search indexing engine to make the dataset ready for discovery. Based on the settings of the associated research context/ plan, datasets get versioned.

Existing Features

- **Uploading an Excel file (version 2.1.0)**
- **Uploading a delimited file (CSV, TSV), (version 2.2.0)**
- **Adding data to an existing dataset (version 2.2.0)**
- **Create Structured Dataset (version 2.3.0)**
- **Create Unstructured Dataset (version 2.4.0)**
- **Push big files to server (version 2.4.0)**
- **Importing metadata schemas via XSD files (version 2.6.0)**
- **The Create Dataset Wizard has been changed to cope with varying metadata structures. (version 2.6.0)**

New Features

- NA

Changed/ Enhanced Features

- NA

Dropped Features

- NA

Fixed Issues

- NA

Breaking Changes

- NA

Known Issues

- Empty rows within or at the end of Excel or CSV files lead to validation errors and should be removed (by the user) before adding (i.e. uploading) data to a dataset.

d) Data Planning Module

The purpose of the data planning module is to manage (create, edit, delete) data and metadata structures, data attributes (variables), units, data types and their relations. The aim is to foster reuse and data integration while retaining flexibility.

A conceptual model showing the connection and relationship between the different terms and entities is available at: <http://fusion.cs.uni-jena.de/bppCM/index.htm>

Existing Features

- **Data structure manager (version 2.1.0)**
- **Data attribute manager (version 2.1.0)**

- **Data type manager (version 2.1.0)**
- **Unit manager (version 2.1.0)**
- **Unstructured data structures (version 2.4.0)**
- **Create copy of a data structure (version 2.5.1)**
- **Creating units without a data type assigned to it is no longer possible (version 2.6.0)**
- **In data type creation, more information is provided on available system types (version 2.6.0)**
- **In-line editing for name and description of a data structure (version 2.6.0)**
- **Data Attributes and Variables can now have constraints (e.g. list of domain values, data ranges, and patterns as regular expressions)(version 2.7.0)**
- **Units can now contain a dimension specification (e.g. Length, Mass, Time))(version 2.7.0)**
- **Variables can have individual units of the same dimension (e.g. mm, cm, m, km) independent from their corresponding Data Attribute (version 2.7.0)**
- **The header in downloaded Excel Templates is now locked to avoid accidental editing, which causes errors in the upload process later on (version 2.7.0)**

New Features

- NA

Changed/ Enhanced Features

- NA

Dropped Features

- NA

Fixed Issues

- In the Data Attribute Manager constraints could not be deleted
- After deleting a dataset, its data structure refers to the dataset id=0

Breaking Changes

- NA

Known Issues

- If macros are disabled in Excel, the downloaded Excel template is not being validated in Excel. This also leads to the issue that only the first row is being imported when submitting a dataset to BEXIS using such a template.

e) Data Dissemination Module

The main purpose of this module is to provide users with access to primary data and metadata managed by the system. In the future this module shall also provide support for publishing, orchestrating and harvesting data of the system by external resources.

Existing Features

- **Primary data download as Microsoft Excel file (version 2.2.0)**
- **Primary data download as comma or tab separated file (CSV) (version 2.4.0)**
- **Download of unstructured data (single file, multiple files in ZIP) (version 2.4.0)**

- **Export of metadata from an internal representation into XML files** (version 2.5.0)

New Features

- NA

Changed/ Enhanced Features

- NA

Dropped Features

- Due to a performance issue with large datasets, the customized download (introduced in version 2.4.0) using filters, sorting and column selection has been disabled. Download of the full dataset is still available.

Fixed Issues

- NA

Breaking Changes

- NA

Known Issues

- NA

f) System Administration Module (former name: Security Module)

The System Administration Module (SAM) provides functions for dataset maintenance, system configuration and authentication and authorization management. It is typically only accessible to system administrators or data managers.

Existing Features

- **User self-registration** (version 2.1.0)
- **Users and roles management for an administrator** (version 2.1.0)
- **Feature security** (version 2.2.0)
- **Dataset Security** (version 2.4.0)
- **Sign-On with existing credentials from an external authentication provider (LDAP Service)** (version 2.5.0)
- **System features and datasets can be made publicly accessible without authentication** (version 2.6.0)
- **passwords can be changed by users or administrators** (version 2.6.0)
- **administrators are able to approve, block, or unlock users** (version 2.6.0)
- **Sessions are properly timed out and users are logged off after a given time and informed** (version 2.6.1)
- **Inheritance of feature permissions for groups and users has been changed slightly to be more intuitive.** (version 2.7.0)
- **Internal refactoring: the security module is now part of the System Administration Module.** (version 2.7.0)
- **Delete/Purge Datasets** (version 2.7.0)

New Features

- NA

Changed/ Enhanced Features

- NA

Dropped Features

- Show versions of a dataset caused a runtime error and has been dropped for this release (introduced in version 2.7.0)

Fixed Issues

- Dataset permissions are not taken into account when deleting/purging from the dataset maintenance area
- assigning groups to users (and vice versa) did not work across multiple pages (paging)

Breaking Changes

- NA

Known Issues

- NA
