Overview 3

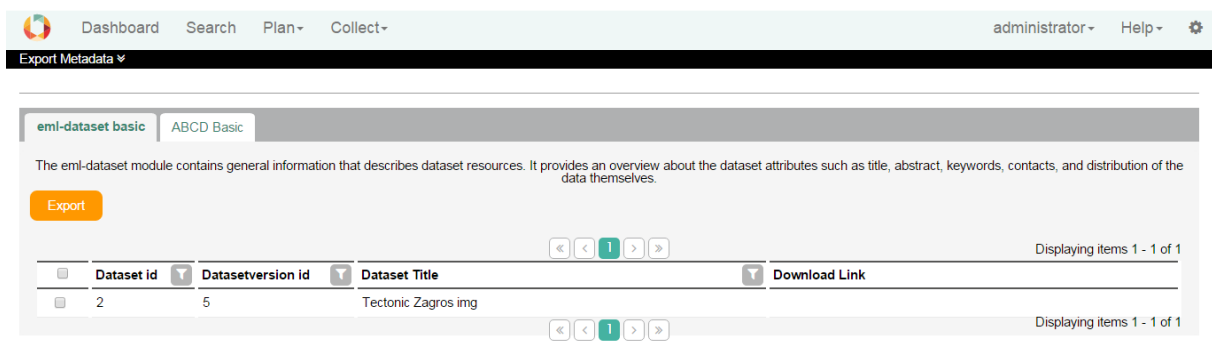

Overview

The Data Dissemination Module, available via Cog button and Export Metadata, provides a tool to export metadata to a standard compliant XML file (EML and ABCD standard are supported). For every metadata structure in the system there is one tab in the tab strip.

The data grid in one tab shows all datasets belonging to the selected metadata structure.

Select a checkbox to mark the datasets you would like to export.

Please click the Export button and wait until the metadata XML file has been created successfully and a download link is available in-line.

The screenshot shows a web interface for exporting metadata. At the top, there is a navigation bar with 'Dashboard', 'Search', 'Plan', and 'Collect' menus, and user information 'administrator' and 'Help'. Below this is a dark header with 'Export Metadata' and a dropdown arrow. The main content area has two tabs: 'eml-dataset basic' (selected) and 'ABCD Basic'. A descriptive paragraph states: 'The eml-dataset module contains general information that describes dataset resources. It provides an overview about the dataset attributes such as title, abstract, keywords, contacts, and distribution of the data themselves.' Below the text is an orange 'Export' button. A data grid follows, with a single row containing a checkbox, 'Dataset id' (2), 'Datasetversion id' (5), 'Dataset Title' (Tectonic Zagros img), and 'Download Link'. Navigation arrows and 'Displaying items 1 - 1 of 1' are visible above and below the grid.

<input type="checkbox"/>	Dataset id	Datasetversion id	Dataset Title	Download Link
<input type="checkbox"/>	2	5	Tectonic Zagros img
